Double Handed Skill Tester by Eliza Zoumis

My entry is a double handed skill testing device that involves using 1 hand to continuously turn a door knob and the other to move a handle along a wire without touching the wire. If the handle touches the wire a light will turn on. A buzzer will sound with every turn of the door knob to ensure that you continue turning the doorknob the whole time.

Adult assistance was required to connect wires, cut timber and solder handle. Adult supervision of drilling, cutting wires and stripping wires to be connected. Adult assistance was also required to write this report.
