Water Cycle – from Cup to Wee to Sea Report
By Jasmine Helwig

I followed how water from the cup is processed to toilet then to sewerage, then to river and sea then back to clean water again.

I read the following reference books and website to help put the scenes together:

1. Investigating the Water Cycle by Candice Ransom
2. Follow that Tap Water!: A Journey Down the Drain By: Bridget Heos
3. Sydney Water Filtration
<https://www.youtube.com/watch?v=5d2yLOHE8QY>

I wrote the scripts, made some props and used previously made LEGO houses plus model of mountain and waterfall I made for school science project this year to create the scenes.

The scenes were videotaped using Samsung mobile phone, then the video clips were downloaded onto a computer.

We used One Shot Video Editor to stitch the video clips together. The audio for the video clips was quiet, so during the video editing, the volume of the video clips had to be boosted and subtitles put in to help to get the information across.

Thank you to Mum for help with editing the script, tips on filming the scenes and use of her mobile phone. Dad helped with use of One Shot Video Editor software to put the video clips together and editing of the video clips.
