Microsoft Powerpoint

Adobe Premier Rush

Discussion of problems

At the start I couldn't decide what I was going to use to create my video. The programs I considered were Adobe Premiere Pro, Premiere Rush or iMovie. I decided on Premiere Rush because it seemed easy to use, it could do what I wanted to make my video and people in my family knew how to use it.

I had problems with the font colour because I tried to only stick to two font colours light green and white but on some backgrounds, you could not see those colours, so I had to change the colour. On the last scene there were lots of colours

behind the writing and a moving background so I settled for light green with a shadow. I hope you can see it 😊.

In the last couple of weeks of making my video I had an accident and got concussion which lasted for many weeks. This made finishing the video harder as I was getting bad headaches and had a deadline to work to.

Acknowledgements of assistance

My mum helped me with learning about Adobe Premiere Rush, filming a scene and teaching me how to use websites to find graphics that are free from copyright.

My dad gave me advise on the final editing.

My sister gave me some technical help with the software.
