Animal Biology

I think that people should know more about animals, about the strange creatures all around us. Basically, to me, animals are the aliens of Earth (some people would think otherwise). They are still being studied and discovered because of how unique and strange they are.

My project is about animals and shows facts about them. This project was coded on Scratch. I drew the pictures, except for the actual animals.

Aim - I created this project so that younger children could learn about animals more easily, and in a way that they would understand better.

Problems I had creating this project - This was one of my first times using scratch, so I was pretty much clueless. My brother helped me a bit, but I figured out things well on my own too. I had no idea what I was doing for the first few days, but after a bit, I got the hang of it.

Scientific Purpose - This project teaches kids (younger) about animal biology.

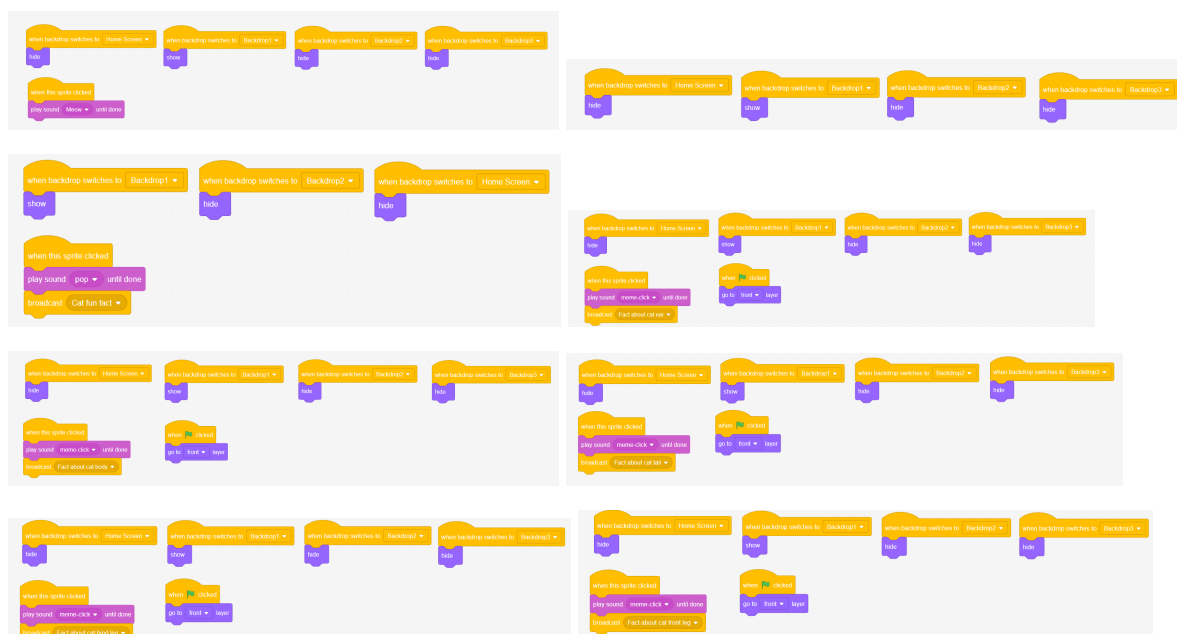

Instructions:

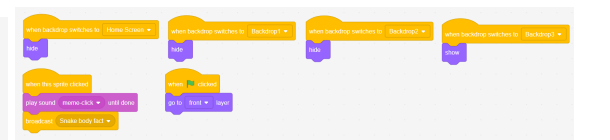

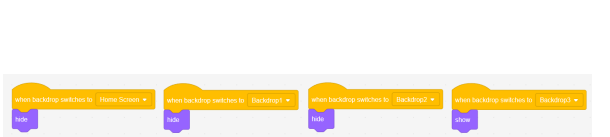

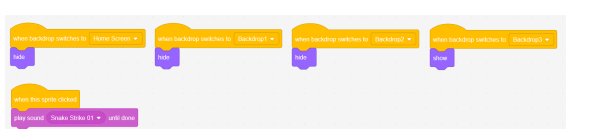

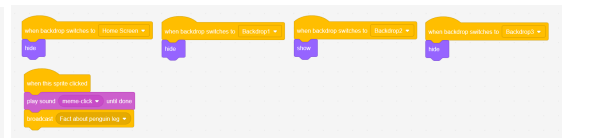

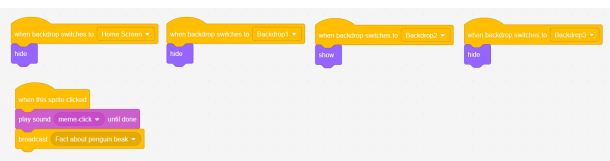

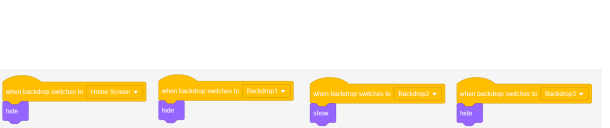

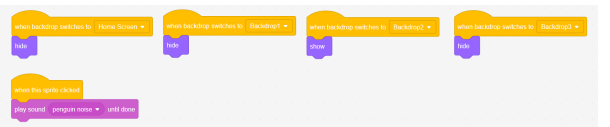

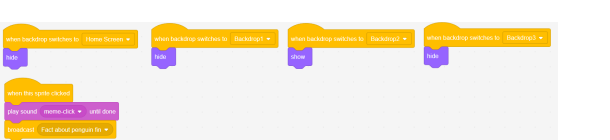

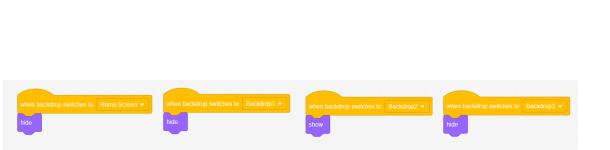

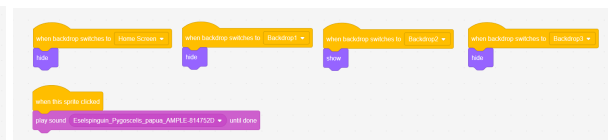

1. Get onto Scratch
2. Search “Animal Biology”
3. Get into “Animal Biology”
4. Press “Start”
5. Press the buttons for facts
6. Press the animal to hear it’s noise
